*Achieving Results Using an Alternate Perspective*

## OVERVIEW

In a world where everything is a target, AIS has expertise in analyzing hardware and software systems from an adversarial perspective. This type of approach has proven results in identifying vulnerabilities and providing mitigation techniques. Let us find the vulnerabilities, so your adversaries don't.

## Our Services

AIS provides our clients with adversarial Test and Evaluation (T&E) services for next generation capabilities developed by both government and commercial customers. T&E thoroughly exhausts realistic approaches that adversaries would take to compromise mission success. The target is systematically reverse engineered to understand how it operates. This facilitates the identification of potential security vulnerabilities and their impact for developers and their stakeholders in the event of exploitation.

## Trust Us To...

- Analyze and understand the target hardware/software
- Identify security vulnerabilities
- Provide proof-of-concept exploits
- Provide mitigation techniques

## KEY FEATURES

- Reverse Engineering
- Software Characterization
- Functional Testing
- Hardware and Software Security
