

Metasponse

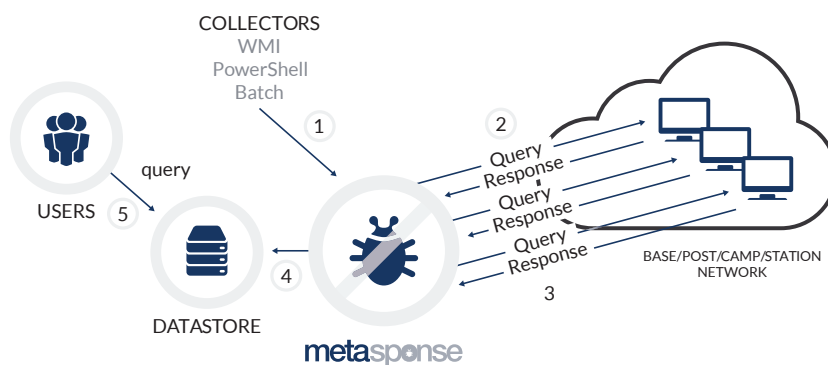

Proactive Malware Hunting and
Incident Response Framework

Metaspense

Enabling Cyber Operators to Hunt and Respond Before Incidents Become a Problem

OVERVIEW

A fully customizable environment and highly extensible framework that supports ease of integration with new capabilities and maximum agility for protecting your enterprise network. No need for more security software agents to already overburdened endpoints.

A Proven Capability

- Currently in use by 33rd NWS AFCERT
- Routinely used to scan 500,000+ Windows OS enterprise endpoints
- Multiple third-party developers are extending Metaspense through the plugin API

Advantage Metaspense

- Agent-less interaction with remote endpoints using existing interfaces
- Transport redundancy and mission creation agility provide fight-through capabilities to allow operational personnel to hunt and counter nation state-level cyber attacks
- New capabilities seamlessly added to the framework
- Easily extensible through a well-established and defined Python API
- Minimal developer requirements for implementing new plugin capabilities

KEY FEATURES

- Agility to adapt defensive tactics, techniques and procedures during operations.
- Scalability to distribute response missions to large and diverse enterprise networks.
- Flexibility in the field to target dynamic threat actors
